

ENTERPRISE SURVEYS

INDICATOR DESCRIPTIONS

July 21, 2023

ABOUT ENTERPRISE SURVEYS

The Enterprise Surveys focus on the many factors that shape the business environment. These factors can be accommodating or constraining for firms and play an important role in whether a country will prosper or not. An accommodating business environment is one that encourages firms to operate efficiently. Such conditions strengthen incentives for firms to innovate and to increase productivity—key factors for sustainable development. A more productive private sector, in turn, expands employment and contributes taxes necessary for public investment in health, education, and other services. In contrast, a poor business environment increases the obstacles to conducting business activities and decreases a country's prospects for reaching its potential in terms of employment, production, and welfare.

The Enterprise Surveys are conducted by the World Bank and its partners across all geographic regions and cover small, medium, and large companies. The surveys are administered to a representative sample of firms in the non-agricultural formal private economy. The universe of the survey, also known as the population, is consistently defined in all countries and includes the entire manufacturing sector, the services sector, and the transportation and construction sectors. Public utilities, government services, health care, and financial services sectors are not included in the universe. Uniform universe, uniform methodology of implementation, and a core questionnaire are the basis of the Global methodology under which most Enterprise Surveys have been implemented since 2006.

The Enterprise Surveys collect a wide array of qualitative and quantitative information through face to face interviews with firm managers and owners regarding the business environment in their countries and the productivity of their firms. The topics covered in Enterprise Surveys include infrastructure, trade, finance, regulations, taxes and business licensing, corruption, crime and informality, finance, innovation, labor, and perceptions about obstacles to doing business.

The qualitative and quantitative data collected through the surveys connect a country's business environment characteristics with firm productivity and performance. The Enterprise Survey is useful for both policymakers and researchers. The surveys are repeated over time to track changes and benchmark the effects of reforms on firms' performance.

LIST OF INDICATORS

Introduction to ES Indicators, By Subgroup.....	10
Indicator Comparability.....	11
Computing Regional and Income Group Averages.....	11
Definitions of Subgroup	12
Regulations and Taxes.....	13
[reg1] Senior management time spent in dealing with requirements of government regulation (%).....	14
[reg2] Average number of visits or required meetings with tax officials.....	15
[reg6] Percent of firms that were visited or required to meet with tax officials.....	16
[reg2_c] If there were visits, Average number of visits or required meetings with tax officials.....	17
[reg4] Percent of firms identifying tax rates as major constraint.....	18
[reg5] Percent of firms identifying tax administration as major constraint	19
[bus2] Days to obtain operating license.....	20
[bus3] Days to obtain construction-related permit	21
[bus1] Days to obtain an import license	22
[bus5] Percent of firms identifying business licensing and permits as major constraint	23
[reg7] Percent of firms identifying political instability as a major constraint	24
[reg8] Percent of firms identifying access to land as a major constraint.....	25
Corruption.....	26
[corr4] Percent of firms expected to give gifts to public officials (to get things done)	27
[corr3] Value of gift expected to secure government contract (% of contract)	28
[corr5] Percent of firms expected to give gifts to get a phone connection	29
[corr6] Percent of firms expected to give gifts to get an electrical connection.....	30
[corr7] Percent of firms expected to give gifts to get a water connection	31
[corr8] Percent of firms expected to give gifts to get a construction permit.....	32
[corr9] Percent of firms expected to give gifts to get an import license	33
[corr10] Percent of firms expected to give gifts to get an operating license.....	34
[corr1] Percent of firms expected to give gifts in meetings with tax officials	35
[corr2] Percent of firms expected to give gifts to secure a government contract*.....	36
[corr11] Percent of firms identifying corruption as a major constraint.....	37
[corr12] Percent of firms believing the court system is fair, impartial and uncorrupted.....	38
[graft2] Bribery depth (% of public transactions where a gift or informal payment was requested).....	39

[graft3] Bribery incidence (% of firms experiencing at least one bribe payment request).....	41
[crime9] Percent of firms identifying the courts as a major constraint	43
Crime.....	44
[crime1] Percent of firms paying for security	45
[crime3] Losses due to theft and vandalism against the firm (% of annual sales).....	46
[crime3_c] If there were losses, average losses due to theft and vandalism (% of annual sales)	47
[crime2] Security costs (% of annual sales)	48
[crime2_c] If the establishment pays for security, average security costs (% of annual sales)	49
[crime5] Products shipped to supply domestic markets that were lost due to theft (% of product value)*	50
[crime8] Percent of firms identifying crime, theft and disorder as a major constraint.....	51
[crime10] Percent of firms experiencing losses due to theft and vandalism.....	52
Informality.....	53
[infor3] Percent of firms expressing that a typical firm reports less than 100% of sales for tax purposes	54
[infor1] Percent of firms competing against unregistered or informal firms.....	55
[infor2] % of firms identifying practices of competitors in the informal sector as a major constraint.....	56
[infor4] Percent of firms formally registered when started operations in the country	57
[infor5] Number of years firms operated without formal registration	58
Gender	59
[gend1] Percent of firms with female participation in ownership	60
[gend2] Proportion of permanent full-time workers that are female.....	61
[gend3] Proportion of permanent full-time non-production workers that are female *	62
[gend4] Percent of firms with a female top manager.....	63
[gend5] Proportion of permanent full-time production workers that are female *	64
[gend6] Percent of firms with majority female ownership	65
Finance	66
[fin23] Percent of firms that are fully credit constrained	67
[fin24] Percent of firms that are partially credit constrained	69
[fin25] Percent of firms that are credit unconstrained	72
[fin14] Percent of firms with a bank loan/line of credit.....	74
[fin1] Proportion of investments financed by internal funds (%).....	75
[fin2] Proportion of investments financed by banks (%).....	76
[fin3] Proportion of investments financed by supplier credit (%).....	77
[fin4] Proportion of investments financed by equity or stock sales (%)	78

[fin5] Proportion of investments financed by other financing sources (%)	79
[fin6] Proportion of working capital financed by internal funds (%)	80
[fin7] Proportion of working capital financed by banks (%)	81
[fin8] Proportion of working capital financed by supplier credit (%)	82
[fin9] Proportion of working capital financed by other financing sources (%)	83
[fin19] Proportion of working capital financed by external sources (%)	84
[fin12] Percent of firms using banks to finance investments	85
[fin13] Percent of firms using banks to finance working capital	86
[fin22] Percent of firms using supplier/customer credit to finance working capital	87
[fin10] Value of collateral needed for a loan (% of the loan amount)	88
[fin11] Proportion of loans requiring collateral (%)	89
[fin16] Percent of firms identifying access to finance as a major constraint	90
[fin15] Percent of firms with a checking or savings account	91
[fin17] Proportion of sales that are pre-paid (%)	92
[fin18] Proportion of sales sold on credit (%)	93
[fin20] Percent of firms not needing a loan	94
[fin21] Percent of firms whose recent loan application was rejected	95
[t2] Percent of firms with annual financial statement reviewed by external auditor	96
Infrastructure	97
[in1] Delay in obtaining an electrical connection (upon application)	98
[in2] Number of electrical outages in a typical month	99
[in16] Percent of firms experiencing electrical outages	100
[in3] Duration of a typical electrical outages (hours)	101
[in3_c] If there were outages, average duration of a typical electrical outages (hours)	102
[in15] Average total time of power outages per month	103
[in4] Losses due to electrical outages (% of annual sales)	104
[in4_c] If there were outages, average losses due to electrical outages (% of annual sales)	105
[in5] Delay in obtaining a water connections (days)	106
[in6] Number of water insufficiencies in a typical month*	107
[in17] Percent of firms experiencing water insufficiencies *	108
[in7] Duration of insufficient water supplies (hours)*	109
[in7_c] If there were shortages, average duration of the water shortage (hours)*	110
[in8] Delay in obtaining a mainline telephone connection (days)	111
[in9] Percent of firms owning or sharing a generator	112

[in10] Proportion of electricity from a generator (%)	113
[in10_c] If a generator is used, average proportion of electricity from generator (%)	114
[in11] Percent of firms identifying transportation as a major constraint.....	115
[in12] Percent of firms identifying electricity as a major constraint	116
[in14] Proportion of products lost to breakage or spoilage during shipping to domestic markets (%)*	117
Management Practices.....	118
[mgmt1] Management practices index.....	119
[mgmt2] Score on action when a problem arose	120
[mgmt3] Score on number of performance indicators monitored.....	121
[mgmt4] Score on time focus of production/service provision targets	122
[mgmt5] Score on achievability of production/service provision targets.....	123
[mgmt6] Score on knowledge of production/service provision targets.....	124
[mgmt7] Score on basis of managers' performance bonuses	125
[mgmt8] Score on extent to which non-managers are promoted based on performance	126
[mgmt9] Score on extent to which under-performing non-managers are reassigned or dismissed.....	127
Innovation and Technology	128
[t1] Percent of firms with internationally-recognized quality certification.....	129
[t4] Percent of firms using technology licensed from foreign companies*	130
[t5] Percent of firms having its own website	131
[t6] Percent of firms using E-mail to communicate with clients/suppliers	132
[t7] Percent of firms that introduced a new product/service	133
[t8] Percent of firms whose new product/service is also new to the main market.....	134
[t9] Percent of firms that introduced a process innovation	135
[t10] Percent of firms that spend on R&D.....	136
Trade	137
[tr1] Days to clear direct exports through customs	138
[tr2] Days to clear imports from customs*	139
[tr4] Proportion of total sales that are domestic sales (%)	140
[tr5] Proportion of total sales that are exported directly (%).....	141
[tr6] Proportion of total sales that are exported indirectly (%).....	142
[tr15] Percent of firms exporting directly (at least 1% of sales).....	143
[tr16] Percent of firms exporting directly (at least 10% of sales).....	144
[tr10] Percent of firms exporting directly or indirectly (at least 1% of sales).....	145

[tr17] Percent of firms exporting directly or indirectly (at least 10% of sales)	146
[tr7] Proportion of total inputs that are of domestic origin (%)*	147
[tr8] Proportion of total inputs that are of foreign origin (%)*	148
[tr11] Percent of firms using material inputs and/or supplies of foreign origin*	149
[tr9] Percent of firms identifying customs and trade regulations as a major constraint	150
[tr14] Days of inventory of main input*	151
[tr12] Products exported directly lost due to theft (%)	152
[tr13] Products exported directly lost due to breakage or spoilage (%)	153
Workforce	154
[wk1] Percent of firms offering formal training	155
[wk2] Proportion of workers offered formal training (%)*	156
[wk8] Years of the top manager's experience working in the firm's sector	157
[wk14] Number of workers	158
[wk12] Number of permanent full time workers	159
[wk11] Number of temporary workers	160
[wk18] Proportion of permanent workers (out of all workers)	161
[wk17] Proportion of temporary workers (out of all workers)	162
[wk6] Number of permanent production workers*	163
[wk7] Number of permanent non-production workers*	164
[wk15] Proportion of production workers (out of all permanent workers)*	165
[wk16] Proportion of non-production workers (out of all permanent workers)*	166
[wk3] Number of permanent skilled production workers*	167
[wk4] Number of unskilled production workers *	168
[wk19] Proportion of skilled workers (out of all production workers)*	169
[wk13] Proportion of unskilled workers (out of all production workers)*	170
[wk9] Percent of firms identifying labor regulations as a major constraint	171
[wk10] Percent of firms identifying an inadequately educated workforce as a major constraint	172
Firm Characteristics	173
[car1] Age (years)	174
[car2] Proportion of private domestic ownership in a firm (%)	175
[car3] Proportion of private foreign ownership in a firm (%)	176
[car4] Proportion of government/state ownership in a firm (%)	177
[car5] Proportion of other ownership in a firm (%)	178
[car6] Proportion of a firm held by the largest owner(s) (%)	179

[car7] Percent of firms with at least 10% of private foreign ownership	180
[car8] Percent of firms with at least 10% of government/state ownership	181
[lform1] Percent of firms with legal status of publicly listed company	182
[lform2] Percent of firms with legal status of privately held Limited Liability Company	183
[lform3] Percent of firms with legal status of Sole Proprietorship	184
[lform4] Percent of firms with legal status of Partnership	185
[lform5] Percent of firms with legal status of Limited Partnership	186
The Biggest Obstacle	187
[obst1] Access to finance	188
[obst2] Access to land	189
[obst3] Business licensing and permits	190
[obst4] Corruption	191
[obst5] Courts.....	192
[obst6] Crime, theft and disorder	193
[obst7] Customs and trade regulations.....	194
[obst8] Electricity	195
[obst9] Inadequately educated workforce.....	196
[obst10] Labor regulations.....	197
[obst11] Political instability.....	198
[obst12] Practices of competitors in the informal sector.....	199
[obst13] Tax administration	200
[obst14] Tax rates.....	201
[obst15] Transport.....	202
Performance.....	203
[perf1] Real annual sales growth (%)	204
[perf2] Annual employment growth (%).....	205
[perf3] Annual labor productivity growth (%)	206
[t3] Capacity utilization (%) *.....	208
[perf4] Percent of firms buying fixed assets	209
Descriptions of Indicator Updates.....	210
Appendix.....	213

Abbreviations

BEEPS	Enterprise Surveys implemented in Eastern Europe and Central Asian countries are also known as Business Environment and Enterprise Performance Surveys (BEEPS) and are jointly conducted by the World Bank and the European Bank for Reconstruction and Development.
ECA	Eastern European and Central Asia region
LAC	Latin America and the Caribbean region
EAP	East Asia and Pacific region
SAR	South Asia region
AFR	Africa region
MENA	Middle East and North Africa region

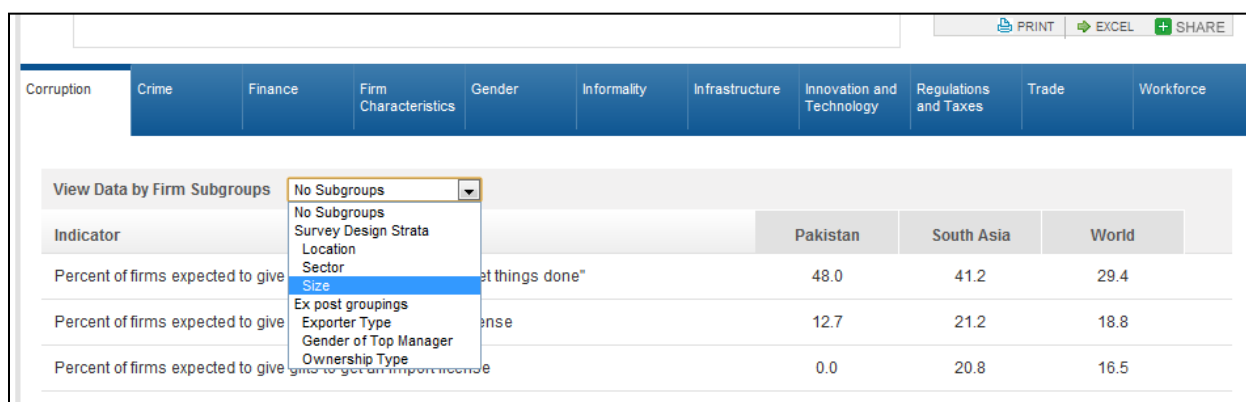

Notes

* This indicator is computed using data from manufacturing firms only.

INTRODUCTION TO ES INDICATORS, BY SUBGROUP

In addition to country-level statistics, Enterprise Survey (ES) indicators are presented by subgroups based on firm characteristics. Indicators from surveys following the **Global** sampling methodology are representative at the country level. However, more care is necessary when interpreting indicators by subgroups.

In the figure below, the drop-down menu on each country page allows the user to select how they wish to view an indicator. The user can view indicator values for the entire sample or by subgroups. Surveys following the **Global** methodology are stratified by business sector, location, and firm size. When analyzing ES indicators in these groupings, the results are representative of the associated populations¹. However, since the **Global** sampling methodology does not stratify by gender of the top manager, exporter status, or ownership (ex post groupings), the intended level of precision is not guaranteed for indicator values by these groupings.

The screenshot shows the Enterprise Survey (ES) interface. At the top, there are navigation tabs for various categories: Corruption, Crime, Finance, Firm Characteristics, Gender, Informality, Infrastructure, Innovation and Technology, Regulations and Taxes, Trade, and Workforce. Below these tabs, there is a section titled "View Data by Firm Subgroups" with a dropdown menu. The dropdown menu is open, showing options: No Subgroups, Survey Design Strata, Location, Sector, Size, Ex post groupings, Exporter Type, Gender of Top Manager, and Ownership Type. The "No Subgroups" option is currently selected. Below the dropdown, there is a table with columns for "Indicator", "Pakistan", "South Asia", and "World". The table contains three rows of data:

Indicator	Pakistan	South Asia	World
Percent of firms expected to give up things done"	48.0	41.2	29.4
Percent of firms expected to give up things done"	12.7	21.2	18.8
Percent of firms expected to give up things done"	0.0	20.8	16.5

Surveys that are Non-Global do not yield results that are representative of the firm population in a country. Please check if a survey is Global or not, as this will greatly affect the interpretation of survey results.

¹ At the country level, and levels of stratification, sample averages are representative of the associated population when calculated with sampling weights.

INDICATOR COMPARABILITY

Indicators are comparable across all the countries and years in surveys that followed the [Enterprise Surveys Global Methodology](#). Some older surveys did not follow the Global methodology, and are not comparable to other surveys. Please refer to the [DataDetails.xls](#) file for a list of Global and Non-Global surveys.

COMPUTING REGIONAL AND INCOME GROUP AVERAGES

Regional and income group averages of indicators are computed by taking a simple average of country-level estimates. For each economy, only the latest available year of survey data is used in this computation. Only surveys posted during the years 2010-2017, and adhering to the [Enterprise Surveys Global Methodology](#), are used to compute these regional and "all countries" averages.

In June 2017, an inconsistency was found and fixed in the computation of regional and income averages found in the Country Highlights and Country Profiles.

Definitions of Subgroup

Table 1. Definition of Subgroups

Subgroup	Subgroup levels	Description
Note: The cuts below are included in the levels of sampling stratification. The sufficient sample sizes should ensure the intended level of precision for the indicator values analyzed at these levels. Please refer to the Sampling Note on the Methodology page of the website.		
Firm Size	Small: 5-19 workers Medium: 20-99 workers Large: 100+	Firm size is a composite measure of permanent and temporary workers. The number of temporary workers is adjusted by the average number of months worked in a year.
Location	Varies by Survey	Enterprise Surveys covers selected regions within a country that represent the largest centers of production and business enterprise.
Business Sector	Varies by Survey	Surveys are stratified by business sector. At a minimum, the stratification delineates between Manufacturing and Services firms. In larger economies, additional sectors are selected for stratification.
Note: The cuts below are NOT included in the levels of stratification. The resulting sample sizes are not guaranteed to ensure the intended level of precision for the indicator values analyzed at these levels.		
Gender of Top Manager	Male Female	Respondents are asked to report the gender of the top manager. This variable is only available in the latest surveys using the Global methodology.
Exporting Status	Non-exporter Exporter	A firm is an exporter if at least 10 percent of its annual sales is derived from direct exports
Ownership (Domestic vs. Foreign)	Domestic (less than 10% foreign ownership) At least 10% Foreign Ownership	A firm is considered to have foreign ownership if at least 10 percent of ownership is held by foreigners.

REGULATIONS AND TAXES

Good economic governance in areas such as taxation and regulations and permits and licenses are a fundamental pillar for the creation of a favorable business environment.

The Enterprise Surveys provide qualitative and quantitative measures of taxation and regulations. For example, the Enterprise Surveys approximates the “time tax” imposed by regulations: it measures the time spent by senior management in meetings with public officials. Another indicator, the average number of visits or required meetings with tax officials, measures the average number of tax inspections or meetings with tax inspectors in each year.

Effective regulations address market failures that inhibit productive investment and reconcile private and public interests. The number of permits and approvals that businesses need to obtain, and the time it takes to obtain them, are expensive and time consuming. The existing legislation of a country also determines the mix of legal forms private firms take and determines the level of protection for investors thus affecting the incentives to invest. Those indicators focus on the efficiency of business licensing and permit services. The indicators evaluate the delays faced when demanding these services.

Regulation and Tax									
[reg1] Senior management time spent in dealing with requirements of government regulation (%)									
Description Average percentage of senior management's time that is spent in a typical week dealing with requirements imposed by government regulations (eg. Taxes, customs, labor regulations, licensing and registration), including dealings with officials, completing forms, et cetera.									
Survey Variable Used to Construct Indicator This indicator is created from the variable J.2.									
J.2	In a typical week over the last year, what percentage of total senior management's time was spent on dealing with requirements imposed by government regulations? [By senior management I mean managers, directors, and officers above direct supervisors of production or sales workers. Some examples of government regulations are taxes, customs, labor regulations, licensing and registration, including dealings with officials and completing forms]								
<table> <tr> <th></th><th>Percent</th></tr> <tr> <td>Senior management's time spent on dealing with regulations</td><td>j2 %</td></tr> <tr> <td>No time was spent</td><td>0</td></tr> <tr> <td>Don't know (spontaneous)</td><td>-9</td></tr> </table>			Percent	Senior management's time spent on dealing with regulations	j2 %	No time was spent	0	Don't know (spontaneous)	-9
	Percent								
Senior management's time spent on dealing with regulations	j2 %								
No time was spent	0								
Don't know (spontaneous)	-9								
Notes									
Indicator Updates									
November 18, 2010	Outlier Program Change #2 affected outlier treatment on the variable j2.								
May 2, 2011	Changes to ECA 2002 & 2005 surveys

REGULATION AND TAX

[reg2] Average number of visits or required meetings with tax officials**Description**

Average number of visits or required meetings with tax officials. If the respondent answered "No" to question J.3, a zero is recorded for the average number of visits.

Survey Variable Used to Construct Indicator

This indicator is created from the variables J.3 and J.4.

J.3	Over the last year, was this establishment visited or inspected by tax officials?
------------	---

Yes	1
No	2
Don't know (spontaneous)	-9

GO TO QUESTION J.6a

REGULATION AND TAX

[reg2_c] If there were visits, Average number of visits or required meetings with tax officials**Description**

If there were a positive number of visits or required meeting with tax officials, what was the average number? The variable J.4 only allows positive number of visits as a response.

Survey Variable Used to Construct Indicator

This indicator is created from the variable J.4.

J.4	Over the last year, how many times was this establishment either inspected by tax officials or required to meet with them?
------------	--

	Number
Times inspected or met with tax officials	j4
Don't know (spontaneous)	-9

Notes**Indicator Updates**

November 10, 2009	Conditional Indicator Created

May 2, 2011	Changes to ECA 2002 & 2005 surveys

Back to [List of Indicators](#)

REGULATION AND TAX

[reg4] Percent of firms identifying tax rates as major constraint**Description**

Percentage of firms identifying tax rates as a "major" or "very severe" obstacle.

Survey Variable Used to Construct Indicator

This indicator is created from the variable J.30a.

J.30	As I list some factors that can affect the current operations of a business, please look at this card and tell me the degree to which you think each factor is an obstacle to the current operations of this establishment. SHOW CARD 21
-------------	---

	No obstacle	Minor obstacle	Moderate obstacle	Major obstacle	Very Severe Obstacle	Do Not Know (spontaneous)	Does Not Apply (spontaneous)
Tax rates j30a	0	1	2	3	4	-9	-7

Notes

For BEEPS surveys conducted prior to 2008, this question used a four-point scale instead of the current five-point answer scale. "Very Severe Obstacle" was not an answer option.

Back to [List of Indicators](#)

REGULATION AND TAX

[bus2] Days to obtain operating license

Description

The average wait, in days, to obtain an operating license.

Survey Variable Used to Construct Indicator

This indicator is created from the variable J.14.

J.14	Approximately how many days did it take to obtain this operating license from the day of the application to the day it was granted?
-------------	---

	Days
Wait for operating license	j14
Less than one day	1
Still in process	-6
Application denied	-5
Don't know (spontaneous)	-9

Notes

Indicator Updates

Summer 2009	Outlier Program Change #1 affected outlier treatment on the variable j14
November 18, 2010	Outlier Program Change #2 affected outlier treatment on the variable j14

REGULATION AND TAX

[bus3] Days to obtain construction-related permit

Description

Average wait, in days, to obtain construction-related permit.

Survey Variable Used to Construct Indicator

This indicator is created from the variable G.3.

G.3	In reference to that application for a construction-related permit, approximately how many days did it take to obtain it from the day of the application to the day the permit was granted?
------------	---

	Days
Wait for a construction-related permit	g3
Less than one day	1
Still in process	-6
Application denied	-5
Don't know (spontaneous)	-9

Notes

Indicator Updates

CORRUPTION

Corruption by public officials may present a major administrative and financial burden on firms. Corruption creates an unfavorable business environment by undermining the operational efficiency of firms and raising the costs and risks associated with doing business.

Inefficient regulations constrain firm efficiency as they present opportunities for soliciting bribes where firms are required to make “unofficial” payments to public officials to get things done. In many countries bribes are common and quite high and they add to the bureaucratic costs in obtaining required permits and licenses. They can be a serious impediment for firms’ growth and development.

The Enterprise Surveys include several indicators for corruption. The Bribery depth reflects the proportion of times a firm was asked or expected to pay a bribe when soliciting six different public services, permits or licenses. Other indicators identify the extent to which specific regulatory and administrative officials require bribe payments during meetings with tax inspectors or to secure a government contract. Another set of indicators focuses on bribes to obtain specific licenses or permits, and shows the share of firms that are expected to make informal payments to secure import and operating licenses and to obtain a construction permit

CORRUPTION

[corr4] Percent of firms expected to give gifts to public officials (to get things done)

Description

Percentage of establishments that consider that firms with characteristics similar to theirs are making informal payments or giving gifts to public officials to "get things done" with regard to customs, taxes, licenses, regulations, services etc.

Survey Variable Used to Construct Indicator

This indicator is created from the variable J.7. If either j7a or j7b is positive, then the firm is considered to pay. If the respondent answers -8, it is also interpreted that the firm pays.

J.7	It is said that establishments are sometimes required to make gifts or informal payments to public officials to "get things done" with regard to customs, taxes, licenses, regulations, services etc. On average, what percentage of total annual sales, or estimated total annual value, do establishments like this one pay in informal payments or gifts to public officials for this purpose?
------------	---

	Percent
Percentage of total annual sales paid as informal payment	j7a %
No payments or gifts are paid	0
Don't know (spontaneous)	-9
Refusal (spontaneous)	-8

PROVIDE EITHER ONE OR THE OTHER, NOT BOTH

	LCUs
Total annual informal payment	j7b
No payments or gifts are paid	0
Don't know (spontaneous)	-9
Refusal (spontaneous)	-8

Notes

CORRUPTION

[graft2] Bribery depth (% of public transactions where a gift or informal payment was requested)

Description

The depth of Bribery is the percentage of instances in which a firm was either expected or requested to provide a gift or informal payment during solicitations for public services, licenses or permits. This measure uses data from 6 survey questions for each firm. For purposes of computation, a refusal to answer a particular survey question is considered an affirmative answer.

Survey Variable Used to Construct Indicator

This indicator is created from the variables C.5., C.14, G.4, J.5, J.12, J.15

C.5 In reference to that application for an electrical connection, was an informal gift or payment expected or requested?

Yes	1
No	2
Don't know (spontaneous)	-9
REFUSE (spontaneous)	-8

c5

C.14 In reference to that application for a water connection, was an informal gift or payment expected or requested?

Yes	1
No	2
Don't know (spontaneous)	-9
REFUSE (spontaneous)	-8

c14

G.4 In reference to that application for a construction-related permit, was an informal gift or payment expected or requested?

Yes	1
No	2
Don't know (spontaneous)	-9
REFUSE (spontaneous)	-8

g4

J.5 In any of these inspections or meetings (with tax officials) was a gift or informal payment expected or requested?

Yes	1
No	2
Don't know (spontaneous)	-9
REFUSE (spontaneous)	-8

j5

J.12	In reference to that application for an import license, was an informal gift or payment expected or requested?									
	<table border="1"> <tr> <td>Yes</td> <td>1</td> </tr> <tr> <td>No</td> <td>2</td> </tr> <tr> <td>Don't know (spontaneous)</td> <td>-9</td> </tr> <tr> <td>REFUSE (spontaneous)</td> <td>-8</td> </tr> </table>	Yes	1	No	2	Don't know (spontaneous)	-9	REFUSE (spontaneous)	-8	j12

No	2									
Don't know (spontaneous)	-9									
REFUSE (spontaneous)	-8									
J.15	In reference to that application for an operating license, was an informal gift or payment expected or requested?									
	<table border="1"> <tr> <td>Yes</td> <td>1</td> </tr> <tr> <td>No</td> <td>2</td> </tr> <tr> <td>Don't know (spontaneous)</td> <td>-9</td> </tr> <tr> <td>Refusal (spontaneous)</td> <td>-8</td> </tr> </table>	Yes	1	No	2	Don't know (spontaneous)	-9	Refusal (spontaneous)	-8	j15
Yes	1									
No	2									
Don't know (spontaneous)	-9									
Refusal (spontaneous)	-8									
Notes										
Indicator Updates										
August 18, 2011	Indicator Created. Bribery depth is computed similarly as the Graft Index from A. Gonzalez et al. 2007. World Bank Policy Research Working Paper #4394. Unlike the Graft Index, Bribery depth does not include telephone connections transactions and does include transactions conducted during meetings with tax officials. Another difference is that Bribery depth is calculated at the firm-level unlike the Graft Index which is calculated at the country-level.

CORRUPTION

[graft3] Bribery incidence (% of firms experiencing at least one bribe payment request)**Description**

The percent of firms experiencing at least one bribe payment request across 6 public transactions dealing with utilities access, permits, licenses, and taxes. The six public transaction questions are listed below. For purposes of computation, a refusal to answer a particular survey question is considered an affirmative answer.

Survey Variable Used to Construct Indicator

This indicator is created from the variables C.5., C.14, G.4, J.5, J.12, J.15

C.5 In reference to that application for an electrical connection, was an informal gift or payment expected or requested?

Yes	1
No	2
Don't know (spontaneous)	-9
REFUSE (spontaneous)	-8

c5

C.14 In reference to that application for a water connection, was an informal gift or payment expected or requested?

Yes	1
No	2
Don't know (spontaneous)	-9
REFUSE (spontaneous)	-8

CRIME

Crime imposes costs on firms when they are forced to divert resources from productive uses to cover security costs. Both foreign and domestic investors perceive crime as an indication of social instability, and crime drives up the cost of doing business. Also, commercial disputes between firms and their clients occur regularly while doing business. Resolving these disputes can be challenging when legal institutions are weak or nonexistent.

The Enterprise Surveys capture key dimensions of the effect of crime on firm sales, the extent to which entrepreneurs identify courts as fair and more. For example, the set of indicators measures the direct costs of security incurred by firms as well as their direct losses due to crime. These resources represent an opportunity cost since they could have been invested in productive activities. Another indicator (Perceptions about the Courts) shows the share of firms that recognize the functioning of the courts as being fair, impartial, and uncorrupted.

INFORMALITY

A large informal sector has serious consequences for the formal private sector. The informal sector may pose unfair competition for formal firms. The Enterprise Surveys capture key dimensions the degree of informality in an economy. For example, the set of indicators (unregistered start-ups) shows the percentage of firms that started operation without being formally registered. It approximates the prevalence of informality in the private economy.

INFORMALITY	
[infor3] Percent of firms expressing that a typical firm reports less than 100% of sales for tax purposes	
Description	
Percentage of firms expressing that a typical firm reports less than 100 percent of sales for tax purposes.	
Survey Variable Used to Construct Indicator

GENDER

The Enterprise Surveys provide indicators that describe several dimensions of gender composition in the workforce. It also collects information on the characteristics of the workforce employed in the non-agricultural private economy. The set of indicators presents the composition of the firm's workforce by type of contract and gender. Labor regulations have a direct effect on the type of employment favored by firms and they may have a different impact by gender. Other indicators present the composition of the workforce classified into temporary and permanent workers and reflect the participation of women in regular full time employment.

GENDER							
[gend1] Percent of firms with female participation in ownership							
Description							
Percentage of firms with females among the owners.

FINANCE

The Enterprise Surveys provide indicators of how firms finance their operations and of the characteristics of their financial transactions. For example, Enterprise Surveys provide indicators that compare the relative use of various sources to finance investment. Excessive reliance on internal funds is a sign of potentially inefficient financial intermediation. Another set of indicators measures the use of financial markets by individual firms. It presents the percentage of working capital that is financed by external sources to the firm, and a measure of the burden imposed by loan requirements measured by collateral levels relative to the value of the loans. Additional indicators focus on the use of financial services by private firms both on the credit side, by measuring the percentage of firms with bank loans or lines of credit, and on the deposit mobilization side, by measuring the percentage of firms with checking or savings accounts.

[fin23] Percent of firms that are fully credit constrained

Description

Indicators fin23, fin24, and fin25 are based on Islam and Rodriguez Meza (2023, Islam, Asif Mohammed and Jorge Luis Rodriguez Meza. "How Prevalent Are Credit-Constrained Firms in the Formal Private Sector? Evidence Using Global Surveys". World Bank Policy Research Working Paper; no. WPS 10502). Firms are categorized into fully credit constrained, partially credit constrained, or credit unconstrained as illustrated in the appendix figure. Four sets of survey questions are used for the categorization: (i) whether the firm applied for a loan or line of credit (k16); (ii) if so, what was the outcome of this application (k17); (iii) if it did not apply, the reason for not applying (k20a1); and (iv) whether the firm has access to external finance (variables k3 and k5).

Firms are categorized as fully credit constrained if they do not have access to external finance, and any of the following two conditions are met: (1) the firm did not apply for a loan for any reason other than the lack of need for it; or (2) the firm applied for a loan but the application was rejected, even when it has access to equity financing.

Survey Variable Used to Construct Indicator

This indicator is created from the variables: K.3a, K.5a, K.5i, K.16, K.17, K.20a1.

K.3	Over fiscal year [Insert last complete fiscal year] , please estimate the proportion of this establishment's working capital, that is the funds available for day-to-day operations, that were financed from each of the following sources? SHOW CARD 17
------------	---

	Percent	DON'T KNOW (SPONTANEOUS)
Internal funds or retained earnings	k3a %	-9
Borrowed from banks: private and state-owned	k3bc %	-9
Borrowed from non-bank financial institutions, which include microfinance institutions, credit cooperatives, credit unions, or finance companies	k3e %	-9
Purchases on credit from suppliers and advances from customers	k3f %	-9
Other, moneylenders, friends, relatives, etc.	k3hd %	-9

FINANCE

[fin24] Percent of firms that are partially credit constrained**Description**

Indicators fin23, fin24, and fin25 are based on Islam and Rodriguez Meza (2023, Islam, Asif Mohammed and Jorge Luis Rodriguez Meza. "How Prevalent Are Credit-Constrained Firms in the Formal Private Sector? Evidence Using Global Surveys". World Bank Policy Research Working Paper; no. WPS 10502). Firms are categorized into fully credit constrained, partially credit constrained, or credit unconstrained as illustrated in the appendix figure. Four sets of survey questions are used for the categorization: (i) whether the firm applied for a loan or line of credit (k16); (ii) if so, what was the outcome of this application (k17); (iii) if it did not apply, the reason for not applying (k20a1); and (iv) whether the firm has access to external finance (variables k3 and k5).

Firms are categorized as partially credit constrained if any of the following conditions are met: (1) the firm applied for a loan and the application was partially approved; (2) the firm applied for a loan and the application was rejected, but the firm has access to external sources of finance excluding any equity finance (k5i); or (3) the firm has external finance but did not apply for a loan due to any reason other than no need for it.

Survey Variable Used to Construct Indicator

This indicator is created from the variables: K.3a, K.5a, K.4, K.5i, K.16, K.17, K.20a1

INFRASTRUCTURE

A strong infrastructure enhances the competitiveness of an economy and generates a business environment conducive to firm growth and development. Good infrastructure efficiently connects firms to their customers and suppliers, and enables the use of modern production technologies. Conversely, deficiencies in infrastructure create barriers to productive opportunities and increase costs for all firms, from micro enterprises to large multinational corporations.

The Enterprise Surveys capture the dual challenge of providing a strong infrastructure for electricity, water supply, telephone connections, etc., and the development of institutions that effectively provide and maintain public services. These indicators show the extent to which firms are faced with failures in the provision of electricity and the effect of these failures on sales. Inadequate electricity supply can increase costs, disrupt production, and reduce profitability. Additionally, these indicators measure the efficiency of the water supply for the manufacturing sector. Many manufacturing sectors depend on reliable and efficient sources of water for their operations. The indicators can also be used to evaluate the efficiency of infrastructure services by quantifying the delays in obtaining electricity, water, and telephone connections. Service delays impose additional costs on firms and may act as barriers to entry and investment.

INFRASTRUCTURE													
[in1] Delay in obtaining an electrical connection (upon application)													
Description													
Average wait, in days, experienced to obtain electrical connection from the day this establishment applied for it to the day it received the service.													
Survey Variable Used to Construct Indicator													
This indicator is created from the variable C.4													
C.4	In reference to that application for an electrical connection, approximately how many days did it take to obtain it from the day of the application to the day the service was received?

MANAGEMENT PRACTICES

The Enterprise Surveys provide indicators that describe several dimensions of management practices. These indicators measure the extent to which firms implement better practices such as taking long-term actions to fix and avoid problems in production or service-delivery; number, time-horizon, and other features of production or service-provision targets; use of bonuses or promotion to reward better performance, and demotion to limit under-performance. A subset of survey questions developed by Bloom and Van Reenen (2007, Bloom, Nicholas, and John Van Reenen. "Measuring and explaining management practices across firms and countries." The quarterly journal of Economics 122, no. 4 (2007): 1351-1408) were adapted and implemented as part of the Enterprise Surveys across countries. An important change in the survey methodology was avoiding double-barrelled questions by adding filters. For example, the number of production or service-provision targets is asked in two parts in the Enterprise Surveys: the firms are first asked if they have such targets, and those that say Yes are then asked a follow-up question on the number of such targets. This is methodologically different from asking about this in one question, with "No target" being a response category among the range of targets. The Enterprise Surveys team is documenting the important repercussion this methodological change has on the estimates of management practices in an upcoming working paper.

For the Enterprise Surveys indicators on management practices, the response categories were mapped into the values of the indicator following the coding conventions given in the Table A2 in Bloom, Nicholas, Erik Brynjolfsson, Lucia Foster, Ron Jarmin, Megha Patnaik, Itay Saporta-Eksten, and John Van Reenen. "What drives differences in management practices?" American Economic Review 109, no. 5 (2019): 1648-1683. In this mapping, the responses that suggest the most structured management practice are normalized to 100, and the ones suggesting the least structured are normalized to zero. Bloom et al. (2019) define more structured management practices as those that are more specific, formal, frequent or explicit. It is thus expected that higher levels of these indicators mean better management practices. Note that the management practices indicators are calculated for firms with at least 20 employees.

Management Practices	
[mgmt1] Management practices index	
Description	
<p>Composite index that combines information from eight management practices indicators that are described below (please see mgmt2 through mgmt9 starting on the next page). It is calculated as follows:</p> $mgmt1_i = \frac{\sum_{j=2}^9 mgmtj_i}{8}$ <p>where $mgmtj_i = [0,100]$ is management practice j (2 through 9) by business i, averaged over all 8 components. Observations for which all 8 components are available are used. Due to this structure, mgmt1 varies between 0 and 100. This composite index and all its 8 components are calculated only for establishments with 20 or more employees.</p>	
Survey Variable Used to Construct Indicator	
This composite indicator is created from the following variables: R.1, R.2, R.3, R.4, R.5, R.6, R.7, R.8, R.9, R.10, R.11.	
Notes	
Indicator Updates

Management Practices	
[mgmt3] Score on number of performance indicators monitored	
Description	
<p>Over the last complete fiscal year, how many key performance indicators are monitored in this firm? Examples of key performance indicators include: metrics on service quality, customer satisfaction, production, cost, waste, quality, inventory, and absenteeism. To map between response categories and values of the indicator, the coding conventions are used as in the Table A2 in Bloom, Nicholas, Erik Brynjolfsson, Lucia Foster, Ron Jarmin, Megha Patnaik, Itay Saporta-Eksten, and John Van Reenen. "What drives differences in management practices?" <i>American Economic Review</i> 109, no. 5 (2019): 1648-1683. In particular, the coding conventions are as follows: r3==3 is coded as 100; r3==2 is coded as 66.67; r3==1 is coded as 33.33; r2==2 is coded as 0. As mentioned in the introduction, this is an example of when a double-barrelled survey question from Bloom et al. (2019) was split in two, by adding a filer. Repercussions of this methodological change is being investigated by the Enterprise Surveys team in an upcoming working paper.</p>	
Survey Variable Used to Construct Indicator	
This indicator is created from variables R.2 and R.3.

Description									
<p>What best describes the time frame of operational targets at this firm? Examples of operational targets include: customer satisfaction, wait-times, production, quality, efficiency, on-time delivery. To map between response categories and values of the indicator, the coding conventions are used as in the Table A2 in Bloom, Nicholas, Erik Brynjolfsson, Lucia Foster, Ron Jarmin, Megha Patnaik, Itay Saporta-Eksten, and John Van Reenen. "What drives differences in management practices?" <i>American Economic Review</i> 109, no. 5 (2019): 1648-1683. In particular, the coding conventions are as follows: r5==3 is coded as 1; r5==2 is coded as 66.67; r5==1 is coded as 33.33; r4==2 is coded as 0. As mentioned in the introduction, this is another example of when a double-barrelled survey question from Bloom et al. (2019) was split in two, by adding a filer (R.4). Repercussions of this methodological change is being investigated by the Enterprise Surveys team in an upcoming working paper.</p>									
Survey Variable Used to Construct Indicator

Management Practices

[mgmt5] Score on achievability of production/service provision targets

Description

How easy or difficult is it in your firm for people to typically achieve their operational targets? To map between response categories and values of the indicator, the coding conventions are used as in the Table A2 in Bloom, Nicholas, Erik Brynjolfsson, Lucia Foster, Ron Jarmin, Megha Patnaik, Itay Saporta-Eksten, and John Van Reenen. "What drives differences in management practices?" *American Economic Review* 109, no. 5 (2019): 1648-1683. In particular, the coding conventions are as follows: r6==4 is coded as 1; r6==3 is coded as 0.75; r6==2 is coded as 0.5; r6==5 and r6==6 are coded as 0.25; r6==1 and r4==2 are coded as 0. Notice that 'Targets not achieved' (r6=6) and 'Only achieved with extraordinary effort' (r6=5) were coded together as 0.25; and 'Achieved without much effort' (r6==1) and 'No targets' (r4=2) were coded together as 0. As mentioned above, this is another example of when a double-barrelled survey question from Bloom et al. (2019) was split in two, by adding a filer (R.4). Repercussions of this methodological change is being investigated by the Enterprise Surveys team in an upcoming working paper.

Survey Variable Used to Construct Indicator

This indicator is created from variables R.4 and R.6.

R.4	<p>ASK IF MANUFACTURING Over fiscal year [Insert last complete fiscal year], did this establishment have production targets? Examples of production targets are volume, quality, efficiency, waste, or on-time delivery.</p> <p>ASK IF SERVICES Over fiscal year [Insert last complete fiscal year], did this establishment have service provision targets? Examples of production targets are sales, customer satisfaction, efficiency, waste, or on-time delivery.</p>

Management Practices

[mgmt6] Score on knowledge of production/service provision targets

Description

Who was aware of the operational targets at this firm? To map between response categories and values of the indicator, the coding conventions are used as in the Table A2 in Bloom, Nicholas, Erik Brynjolfsson, Lucia Foster, Ron Jarmin, Megha Patnaik, Itay Saporta-Eksten, and John Van Reenen. "What drives differences in management practices?" *American Economic Review* 109, no. 5 (2019): 1648-1683. In particular, the coding conventions are as follows: r7==4 is coded as 1; r7==3 is coded as 0.67; r7==2 is coded as 0.33; r7==1 and r4==2 are coded as 0. Notice that 'Only senior managers' and 'No targets' (r4=2) were coded together as 0. As mentioned above, this is another example of when a double-barrelled survey question from Bloom et al. (2019) was split in two, by adding a filter (R.4). Repercussions of this methodological change is being investigated by the Enterprise Surveys team in an upcoming working paper.

Survey Variable Used to Construct Indicator

This indicator is created from variables R.4 and R.7.

R.4

ASK IF MANUFACTURING

Over fiscal year [Insert last complete fiscal year], did this establishment have production targets?
Examples of production targets are volume, quality, efficiency, waste, or on-time delivery.

ASK IF SERVICES

Over fiscal year [Insert last complete fiscal year], did this establishment have service provision targets?
Examples of production targets are sales, customer satisfaction, efficiency, waste, or on-time delivery.

INNOVATION AND TECHNOLOGY

The Enterprise Surveys provide indicators that describe several dimensions of technology use and innovation. These indicators measure the extent to which firms invest in obtaining recognized certificates of production and accounting practices. Obtaining international quality certifications may support creating more efficient or effective operations and improve employee's motivation, awareness, and morale. They also provide a sign of high quality that may help reduce waste and increase productivity. Additionally, these indicators demonstrate the use of information and communications technologies (ICT) in business transactions. ICT, such as the Internet, are important tools for all firms because they provide even the smallest of enterprises with the ability to reach national and international markets at lower cost.

INNOVATION AND TECHNOLOGY									
[t1] Percent of firms with internationally-recognized quality certification									
Description									
Percentage of firms that have an internationally-recognized quality certification, i.e. ISO 9000, 9002 or 14000.									
Survey Variable Used to Construct Indicator									
This indicator is created from the variable B.8									
B.8	Does this establishment have an internationally-recognized quality certification? (INTERVIEWER: if there is need for clarification, some examples are: ISO 9000 or 14000, or HAPC)								
<table border="1"> <tr> <td>Yes</td><td>1</td></tr> <tr> <td>No</td><td>2</td></tr> <tr> <td>Still in process</td><td>-6</td></tr> <tr> <td>Don't know (spontaneous)</td><td>-9</td></tr> </table> <div>b8</div>		Yes	1	No	2	Still in process	-6	Don't know (spontaneous)	-9

TRADE

Open markets allow firms to expand, raise standards for efficiency on exporters, and enable firms to import low cost supplies. However, trading also forces firms to deal with customs services and trade regulations, obtain export and import licenses, and in some cases, firms also face additional costs due to losses during transport. The Enterprise Surveys collect information on the operational constraints faced by exporters and importers and quantifies the trade activity of firms. Indicators provide a measure of the intensity of foreign trade in the private sector.

TRADE									
[tr1] Days to clear direct exports through customs									
Description									
Average number of days to clear direct exports through customs.									
Survey Variable Used to Construct Indicator									
This indicator is created from the variable D.4									
D.4	In fiscal year [insert last complete fiscal year] , when this establishment exported goods directly, how many days did it take on average from the time this establishment's goods arrived at their main point of exit (e.g., port, airport) until the time these goods cleared customs?

WORKFORCE

The Enterprise Surveys provide indicators that describe information on the characteristics of the workforce employed in the non-agricultural private economy. The set of indicators presents the composition of the firm's workforce by type of contract and gender, the composition of the workforce classified into temporary and permanent workers, and reflects the participation of women in regular full-time employment. Labor regulations have a direct effect on the type of employment favored by firms and they may have a different impact by gender.

WORKFORCE									
[wk1] Percent of firms offering formal training

WORKFORCE

[wk18] Proportion of permanent workers (out of all workers)

Description

The proportion of permanent workers out of all workers.

Survey Variable Used to Construct Indicator

This indicator is created from the variables L.1, L.6, and L.8. Note that it is calculated only if both the number of permanent and the number of temporary workers are available.

L.1 At the end of fiscal year **[insert last complete fiscal year]**, how many permanent, full-time individuals worked in this establishment? Please include all employees and managers (Permanent, full-time employees are defined as all employees that are employed for a term of one or more fiscal years and/or have a guaranteed renewal of their employment and that work a full shift) **(INTERVIEWER: INCLUDE INTERVIEWEE IF APPLICABLE).**

	Number
Permanent, full-time workers end of last fiscal year	11
DON'T KNOW (SPONTANEOUS)	-9

L.6 How many full-time seasonal or temporary employees did this establishment employ during **[insert last complete fiscal year]**? (Full-time, temporary workers are all short-term (i.e. for less than a year) employees with no guarantee of renewal of employment and work full-time)

	Number
Full-time seasonal or temporary workers employed last fiscal year	16
NO FULL-TIME SEASONAL OR TEMPORARY WORKERS	0
DON'T KNOW (SPONTANEOUS)	-9

GO TO QUESTION L.9b

GO TO QUESTION L.9b

L.8 What was the average length of employment of all full-time temporary employees in fiscal year **[insert last complete fiscal year]**?

	Months
Average length full-time seasonal or temporary employment last fiscal year, in months	18
LESS THAN ONE MONTH	1
DON'T KNOW (SPONTANEOUS)	-9

FIRM CHARACTERISTICS

The Enterprise Surveys collect information from a representative sample of the non-agricultural formal private economy. In addition to collecting information on the business environment the surveys collect information on the characteristics of the firms interviewed. Consequently, the data collected provides a description of the representative private firm in the country and an estimate of how some of the attributes of the average firm are distributed across the population of firms.

Indicators show the distribution of firms according to their age measured by the number of years they have been in operation. The effect the business environment can have on the private sector may depend on firms' experience and longevity. Seasoned firms and young firms may differ in their ability to successfully navigate the business environment.

Indicators also quantify the level of female participation in management and firm ownership. These indicators can help assess whether gender influences the level of exposure of the firm to external factors, such as corruption, access to finance, and technology.

Finally, indicators show the participation of the domestic private sector, the government, the foreign sector and other sectors in the ownership of the typical firm. The distribution provides insight into their levels of equity in the private sector of the economy.

FIRM CHARACTERISTICS					
[car1] Age (years)					
Description					
Age of the firm based on the year in which the firm began operations.					
Survey Variable Used to Construct Indicator					
This indicator is created from the variables B.5.					
B.5	In what year did this establishment begin operations in this country?				
<table border="1"> <tr> <td>Year establishment began operations</td><td>Year</td></tr> <tr> <td></td><td>b5</td></tr> </table> <p>INTERVIEWER: PROVIDE FOUR DIGITS FOR YEAR</p>		Year establishment began operations	Year		b5
Year establishment began operations	Year				
	b5				
Notes					
Indicator Updates					
June 30, 2009	Adjustment: car1 takes only values less than 100				
February 28, 2011	Adjustment: car1 can take on any values thus reversing the limitation imposed June 30, 2009. However, car1 is now subject to outliers removal whereby the variable is log-transformed and then trimmed at plus and minus 3 standard deviations from the mean for each survey.				
May 2, 2011	Changes to ECA 2002 & 2005 surveys

FIRM CHARACTERISTICS			
[car6] Proportion of a firm held by the largest owner(s) (%)			
Description			
Percentage held by largest owner or owners.			
Survey Variable Used to Construct Indicator			
This indicator is created from the variables B.3.			
B.3	What percent of this firm does the largest owner or owner(s) own?		
Percent held by largest owner	<table><tr><th>Percent</th></tr><tr><td>b3 %</td></tr></table>	Percent	b3 %
Percent			
b3 %			
Notes			
Indicator Updates			
February 28, 2011	Please also note that for all countries, b3 was imputed with 100% when firm’s legal status is Sole proprietorship and b3 was missing due to a skip pattern. This is a significant change as in many surveys answering positively to being a Sole Proprietorship caused a skip of question b3.

THE BIGGEST OBSTACLE

The Enterprise Surveys collect mostly quantitative and factual information (the actual day-to-day experiences) from business owners and managers on a range of topics regarding the business environment. Towards the end of the survey interview, there is an opinion-based question asked to the survey respondent that pulls together the various survey topics. Firms are asked to consider which element (out of a list of 15) is the Biggest Obstacle to their establishment. The following group of indicators summarizes how many firms chose each of the various 15 elements. These indicators can aid policymakers in setting priorities when creating programs and policies aimed at improving the business-enabling environment.

THE BIGGEST OBSTACLE																								
[obst1] Access to finance																								
Description																								
Percentage of establishments that consider access to finance to be the Biggest Obstacle

PERFORMANCE

In addition to collecting information on the business environment, Enterprise Surveys collect information on the performance of the firms interviewed. Firms are asked about their annual sales figures and number of permanent full-time employees at the end of the last fiscal year as well as three fiscal years ago.

Indicators show the performance of firms by growth in sales, employment, and labor productivity. All sales data have been converted to 2009 U.S. dollars for global comparability. While different countries will have different growth patterns, comparing performance within a country by firm size or industry or other firm subgroups can yield interesting insights for policymakers and researchers.

PERFORMANCE

[perf1] Real annual sales growth (%)

Description

Real annual sales growth is measured as a percentage change in sales between the last completed fiscal year and a previous period. All sales values are deflated to 2009 using each country's **GDP deflators**.² The formula is:

$$\left(\frac{1}{t}\right) * \frac{d2' - n3'}{(d2' + n3')/2} * (100)$$

where t is the number of years between the current and previous periods, and $d2'$ and $n3'$ are deflated values of $d2$ and $n3$ variables. Note that the GDP deflators are weighted by the closing month of each firms' fiscal year. For example, if a firm's last complete fiscal year spans July 2015 through June 2016, then deflator used for $d2$ is: $\frac{6}{12} \cdot \text{deflator for year 2015} + \frac{6}{12} \cdot \text{deflator for year 2016}$.

Survey Variable Used to Construct Indicator

This indicator is created from the variables D.2 and N.3.

D.2	In fiscal year [insert last complete fiscal year] , what were this establishment's total annual sales for ALL products and services?
------------	--

	LCUs
Last complete fiscal year's total sales	d2
DON'T KNOW (SPONTANEOUS)	-9
PLEASE ALSO WRITE OUT THE NUMBER (i.e. 50,000 as Fifty Thousand)	
	d2x

N.3	In fiscal year [insert three complete fiscal years ago] , three fiscal years ago, what were total annual sales for this establishment?
------------	---

	LCUs
Total annual sales three years ago	n3
IF ESTABLISHMENT WAS NOT IN BUSINESS THREE YEARS AGO	-7
DON'T KNOW (SPONTANEOUS)	-9

² **GDP deflators** are from the World Development Indicators, series NY.GDP.DEFL.ZS [Tìm kiếm hệ số GDP ở đây](#)

PERFORMANCE

[perf2] Annual employment growth (%)

Description

Annualized growth of permanent full-time workers expressed as a percentage. Annual employment growth is the change in full-time employment reported in the current fiscal year from a previous period. For most countries the difference between the two fiscal year periods is two years. However, for some countries the interval is three years. Hence, an annualized measure is used. The formula is

$$\left(\frac{1}{t}\right) * \frac{l1 - l2}{(l1 + l2)/2} * (100)$$

where t is the number of years between the current and previous periods.

Survey Variable Used to Construct Indicator

This indicator is created from the variables L.1 and L.2.

L.1	At the end of fiscal year [insert last complete fiscal year] , how many permanent, full-time individuals worked in this establishment? Please include all employees and managers (Permanent, full-time employees are defined as all paid employees that are contracted for a term of one or more fiscal years and/or have a guaranteed renewal of their employment contract and that work a full shift) (INTERVIEWER: INCLUDE INTERVIEWEE IF APPLICABLE).
------------	---

	Number
Permanent, full-time workers end of last fiscal year	11
DON'T KNOW (SPONTANEOUS)	-9

L.2	Three fiscal years ago, at the end of fiscal year [insert three complete fiscal years ago] , how many permanent, full-time individuals work in this establishment? Please include all employees and managers (INTERVIEWER: INCLUDE INTERVIEWEE IF APPLICABLE).
------------	---

	Number
Permanent, full-time workers three fiscal years ago	12
IF ESTABLISHMENT WAS NOT IN BUSINESS THREE YEARS AGO	-7
DON'T KNOW (SPONTANEOUS)	-9

PERFORMANCE

[perf3] Annual labor productivity growth (%)

Description

Annual labor productivity growth is measured by a percentage change in labor productivity between the last completed fiscal year and a previous period, where labor productivity is sales divided by the number of full-time permanent workers. All sales values are deflated to 2009 using each country's GDP deflators.³ The formula is:

$$\left(\frac{1}{t}\right) * \frac{\left(\frac{d2'}{l1}\right) - \left(\frac{n3'}{l2}\right)}{\left\{\left(\frac{d2'}{l1}\right) + \left(\frac{n3'}{l2}\right)\right\}/2} * (100)$$

where t is the number of years between the current and previous periods, $l1$ and $l2$ are the number of full-time permanent workers, and $d2'$ and $n3'$ are deflated values of $d2$ and $n3$ variables. Note that the GDP deflators are weighted by the closing month of each firms' fiscal year. For example, if a firm's last complete fiscal year spans July 2015 through June 2016, then deflator used for $d2$ is: $\frac{6}{12} \cdot \text{deflator for year 2015} + \frac{6}{12} \cdot \text{deflator for year 2016}$.

Survey Variable Used to Construct Indicator

This indicator is created from the variables D.2, N.3, L.1, and L.2.

D.2	In fiscal year [insert last complete fiscal year] , what were this establishment's total annual sales for ALL products and services?

DESCRIPTIONS OF INDICATOR UPDATES

Outlier Program Change 1 (Summer 2009)

Background: Data collected by the Enterprise Surveys Unit is cleaned as it is collected and checked against a number of quality controls. However, not all data presented through the Enterprise Surveys website is collected by the Enterprise Surveys Unit. For a series of variables, outlier values are identified and removed before the variable is used to construct indicators. A conservative approach is used in this analysis and researchers may wish to use their own techniques to identify outliers by accessing the original raw-data files and performing their own analysis. Variables collected with a response scale form 0% to 100% (e.g. Senior management's time spent on dealing with regulations) are subjected to trimming at plus and minus three standard deviations from the mean. Variables collected with unbounded responses (e.g. Total annual sales figures or Days to obtain an import license) are first log-transformed before being trimmed at plus and minus three standard deviations from the mean.

Change: For variables affected by this change, outlier analysis is performed on the log transformation of the variable. In previous versions of outlier programs, 0.0001 was added to zero values. After the change, 1 is added to all values before performing outlier analysis on the log value. This change was done to preserve zero values when running outlier analysis on logs. Performing the outlier analysis by survey, log values greater (less) than three times the standard deviation from the mean are considered outliers and replaced with a missing value.

Outlier Program Change 2 (November 18, 2010)

Outlier analysis was previously run at the country level. With the addition of new surveys and multiple surveys in the same country, outlier analysis is now run at the survey level.

Indicator Minus Value Change (December 7, 2010)

For the construction of some corruption indicators, negative values (-8 and -9) are changed to extended missing (.a or .b) and are no longer included in the outlier analysis.

Changes to ECA 2002 & 2005 Surveys (May 2, 2011)

The Enterprise Surveys team has made a change to indicators computed for the 2002 and 2005 rounds of surveys conducted in Europe and Central Asia (ECA). This change reflects the exclusion of observations in some sectors in an effort to improve comparability of these data with the more recent rounds of survey collection.

Refusal response incorporation for corr2 indicator (May 1, 2014)

The Enterprise Surveys team has made a correction to the corr2 indicator. Due to some error in the code corr2 did not include refusals to the variable j6. This has now been corrected.

Change of denominator for gend3 indicator (Feb 3, 2014)

The Enterprise Surveys team has made a correction to the gend3 indicator. Inappropriate denominator was used to calculate gend3. This has now been corrected.

Creation of new indicator gend5 (Feb 3, 2014)

The Enterprise Surveys team has created a new indicator gend5 in topic for gender.

Removal of out of date indicators (May 29, 2014)

Indicators that were out of date have been removed from ES website

Creation of new indicator perf4 (Nov 11, 2014)

The Enterprise Surveys team has created a new indicator perf4 in topic for performance.

Creation of new indicator gend6 (Aug 20, 2015)

The Enterprise Surveys team has created a new indicator gend6 in topic for gender.

Methodology change in indicators perf1 and perf3 (Dec 15, 2016)

The Enterprise Surveys team has decided to deflate sales values using the country-level GDP deflators instead of converting them to USD and then deflating using the US GDP deflator.

Creation of 12 new indicators (June 26, 2017)

The Enterprise Surveys team has created 12 new indicators: reg6 for regulation and taxes, fin22 for finance, in16 and in17 for infrastructure, tr17 and tr16 for trade, car7 and car 8 for firm characteristics, and lastly t7, t8, t9, and t10 for innovation and technology.

Creation of 6 new indicators (August 7, 2017)

The Enterprise Surveys team has created 6 new indicators: wk14, wk15, wk16, wk17, wk18, and wk19 on the topic of workforce.

Methodology change in perf1 and perf3 (September 11, 2017)

GDP deflators are now adjusted for the structure of each firm's fiscal year. In particular, we use the closing month of the firms' fiscal year to weigh the annual deflators from WDI accordingly.

Methodology change in t10 (January 30, 2023)

The indicator is restricted to establishments with 20 or more employees.

Creation of 9 new indicators (May 15, 2023)

The Enterprise Surveys team has created 9 new indicators: mgmt1-mgmt9 on the topic of management practices.

Creation of 3 new indicators and a correction (June 26, 2023)

The Enterprise Surveys team has created 3 new indicators: fin23, fin24, and fin25, on the topic of credit constraints. Also, correction was made to handle $r10 = -7$ as described above, instead of inadvertently treating it as missing.
